

Mechanical

Controller Mounting System

Our new POD mounting console has just been launched!

This unit will help the operator to work in a safer and more ergonomic environment. Our new mounting system will enable you to mount any of the CM range of controllers as a stand alone unit that is suitable to install in a wide range of machines from guillotines to milling machines. This also facilitates a simple and easy connection to the rest of the system via a series of multi-connectors, so you will be up and running quickly.

For added safety we have introduced a stop button that isolates the drive current to the motors.

Keyways

Are available call for more information.

Brackets
